

The Ultimate Full Body Charger

A new era of effortless regeneration begins. The Human Regenerator Jet is an advanced wellness solution designed for those who demand the best in longevity and well-being.

A wellness experience so advanced, yet so effortless - where science and nature converge to restore balance, vitality, and longevity. Harnessing the power of Cold Atmospheric Plasma (CAP), this unparalleled 360° wellness approach optimises physical, mental, and emotional well-being, supporting natural healing, regeneration, and relaxation.

How It Works – Mechanism of Action

Our advanced CAP system generates a controlled plasma field, infused with anions, electrons, and static energy, enveloping the body in an active, bioelectric environment.

The interaction of these charged particles supports natural regeneration.

Optimised Charge Distribution

Our plasma JET system, featuring 20 specialised nozzles, emits a precisely controlled plasma stream. Even through (natural fibre) clothing, the static charge effect ensures optimal ion distribution, while grounded metal contact applicators enhance charge conductivity and facilitate electron flow across the body. This seamless interaction creates a balanced charge environment, supporting regeneration, relaxation, and overall longevity.
